

## Volinanserin

## Chemical Properties

CAS No. :	139290-65-6
Formula:	C22H28FNO3
Molecular Weight:	373.46
Storage:	Powder: -20°C for 3 years   In solvent: -80°C for 1 year Actual storage temperature shall be subject to the COA.

## Biological Description

Description	Volinanserin (MDL100907) (MDL 100907) is a potent and selective antagonist of the serotonin receptor 5-HT <sub>2</sub> (K <sub>i</sub> : 0.36 nM) and shows 300-fold selectivity for 5-HT <sub>2</sub> receptor over 5-HT <sub>1c</sub> , alpha-1 adrenergic and sigma receptors.
Targets(IC50)	5-HT Receptor
In vitro	Volinanserin demonstrated low nanomolar or subnanomolar binding in vitro at the 5-HT <sub>2A</sub> receptor and showed a > 100-fold separation from all other receptors measured. Volinanserin had subnanomolar potency as a 5-HT <sub>2A</sub> antagonist in vitro in reversing 5-HT-stimulated inositol phosphate accumulation in NIH 3T3 cells transfected with the rat 5-HT <sub>2A</sub> receptor [2].
In vivo	In mice, Volinanserin blocked amphetamine-stimulated locomotion at doses that did not significantly affect apomorphine-stimulated climbing behavior. When administered chronically, Volinanserin selectively reduced the number of spontaneously active A10 neurons [1]. In vivo, Volinanserin potently inhibited 5-methoxy-N, N-dimethyltryptamine-induced head twitches in mice or 5-hydroxytryptophan-induced head twitches in rats. In vivo, functional tests in mice revealed a > 500-fold separation between doses that produced 5-HT <sub>2A</sub> antagonism and doses that produced alpha 1-adrenergic or striatal D2 antagonism [2].

## Solubility Information

Solubility	DMSO: 125 mg/mL (334.71 mM), Sonication is recommended. Ethanol: 18 mg/mL (48.2 mM), Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)
In vivo Formulation	10% DMSO+90% Saline: < 10 mg/mL (26.78 mM), Lower concentrations may be soluble, but exact solubility limit is unknown. 10% DMSO+40% PEG300+5% Tween 80+45% Saline: 10 mg/mL (26.78 mM), Suspension. <i>Please add the solvents sequentially, clarifying the solution as much as possible before adding the next one. Dissolve by heating and/or sonication if necessary. Working solution is recommended to be prepared and used immediately. The formulation provided above is for reference purposes only. In vivo formulations may vary and should be modified based on specific experimental conditions.</i>

### Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	2.6777 mL	13.3883 mL	26.7766 mL
5 mM	0.5355 mL	2.6777 mL	5.3553 mL
10 mM	0.2678 mL	1.3388 mL	2.6777 mL
50 mM	0.0536 mL	0.2678 mL	0.5355 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Note: The dilution table applies only to solid products. For liquid products, please calculate the stock solution based on the stated concentration and/or density.
