

GFRAL/GFR alpha-like Protein, Human, Recombinant (His & Avi), Biotinylated

General Information

Synonyms:	GFRAL/GFR α -like Protein; C6orf144; GFRAL; GFR alpha-like; GFR α -like; GRAL
Protein Construction:	Ser19-Glu351
Species:	Human
Expression Host:	HEK293 Cells
Accession:	Q6UXV0
Molecular Weight:	40.7 kDa (predicted). Due to glycosylation, the protein migrates to 48-62 kDa based on Tris-Bis PAGE result.

QC Testing

Biological Activity:	Immobilized Human GDF15, His Tag at 1 μ g/ml (100 μ l/well) on the plate. Dose response curve for Biotinylated Human GFRAL, His Tag with the EC50 of 89.1 ng/ml determined by ELISA (QC Test).
Purity:	> 95% as determined by Tris-Bis PAGE; > 95% as determined by HPLC
Endotoxin:	< 1.0 EU/ μ g of the protein as determined by the LAL method.
Formulation:	Lyophilized from a solution filtered through a 0.22 μ m filter, containing PBS (pH 7.4). Typically, 8% trehalose is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in distilled water. The product concentration should not be less than 100 μ g/ml. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

GFR alpha-like (GDNF receptor-alpha-like) is a distant member of the GDNFR family of proteins. Mature human GFR alpha-like is a 376 amino acid (aa) type I transmembrane protein. It contains a 333 aa extracellular domain, a 20 aa transmembrane domain and a 23 aa cytoplasmic domain. GFRAL is a brainstem-restricted receptor for GDF15 which regulates food intake, energy expenditure and body weight in response to metabolic and toxin-

induced stresses.
