

CCL24 Protein, Cynomolgus, Recombinant (His)

General Information

Synonyms:	SCYA24;CK-beta-6;CK-β-6;Ckb-6;MPIF-2;CCL24;MPIF2;member 24;Eotaxin-2
Protein Construction:	His19-His119
Species:	Cynomolgus
Expression Host:	HEK293 Cells
Accession:	A0A7N9CBC6
Molecular Weight:	12.36 kDa (predicted). Due to glycosylation, the protein migrates to 23-38 kDa based on Tris-Bis PAGE result.

QC Testing

Biological Activity:	Immobilized Cynomolgus CCL24, His Tag at 1 µg/ml (100 µl/well) on the plate. Dose response curve for Anti-CCL24 Antibody, hFc Tag with the EC50 of 46.8 ng/ml determined by ELISA.
Purity:	> 90% as determined by Tris-Bis PAGE; > 90% as determined by HPLC
Endotoxin:	< 1.0 EU/µg of the protein as determined by the LAL method.
Formulation:	Lyophilized from a solution filtered through a 0.22 µm filter, containing PBS (pH 7.4). Typically, 8% trehalose is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in distilled water. The product concentration should not be less than 100 µg/ml. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

C-C motif chemokine ligand 24 (CCL24) is a chemokine that regulates inflammatory and fibrotic activities through its receptor, C-C motif chemokine receptor (CCR3). CCL24 is a chemokine that regulates inflammation and fibrosis. It was found to be significantly expressed in patients with non-alcoholic steatohepatitis, in whom it regulates profibrotic processes in the liver.
