Biological Description

Description	H- γ -Glu-Gln-OH (γ -L-glutamyl-L-glutamine) is a highly hydrophilic dipeptide utilized as a building block for advanced drug delivery systems. Carriers composed of H- γ -Glu-Gln-OH, such as poly(L- γ -glutamylglutamine) (PGG), are characterized by high water solubility, superior drug-loading capacity, excellent biocompatibility, and low systemic toxicity. Conjugating drugs (e.g., Paclitaxel) to this peptide moiety significantly improves the solubility of hydrophobic agents and enhances tumor-targeting and tissue penetration (especially in glioblastoma models), leading to optimized anti-tumor efficacy.
