Biological Description

Description	Nrf2-IN-3 is a mKEAP1-selective NRF2 inhibitor that selectively binds KEAP1 mutants and restores their NRF2 inhibitory function by repairing the disrupted KEAP1/NRF2 interaction, and selectively sensitizes cisplatin in xenografts of mouse mKEAP1 cancer cells.
Targets(IC50)	Nrf2,ROS
In vitro	Nrf2-IN-3 is a small-molecule NRF2 inhibitor that selectively binds KEAP1 mutants and restores their NRF2-inhibitory function by repairing the disrupted KEAP1/NRF2 interactions. Nrf2-IN-3 substantially sensitizes KEAP1-mutated tumor cells to cisplatin and gefitinib, but does not do so for wild-type KEAP1 cells, and sensitizes KEAP1 G333C-mutated xenograft to cisplatin. [1]
