Biological Description

|---------------|---|
| Description | Hydroxydione, a neuroactive steroid with general anesthetic properties, is utilized in anesthesia-related research [1] [2]. |
| Targets(IC50) | Others,Histamine Receptor |
| In vivo | Hydroxydione prolongs the duration of hexobarbital-induced narcosis, whereas subsequent doses of hexobarbital shorten the duration of narcosis induced by hydroxydione [1]. When administered intravenously in doses ranging from 5 to 100 mg/kg, hydroxydione induces transient hypotension with minimal bradycardia and impacts respiratory function [2]. |
