## Biological Description

Description	Compound 1059182-21-6 features a cyclic structure characterized by a nitrogen atom occupying an apex (corner) within the heterocycle. Its molecular scaffold integrates aromatic properties due to the presence of a conjugated system, while the inclusion of hydroxyl (-OH) groups confers reactive potential for subsequent modification. Additionally, a halogenated component, specifically a bromine atom, is attached to the aromatic ring, enhancing its propensity for undergoing further synthetic transformations.
