## Biological Description

Description	m-PEG5-Hydrazide is a PEG-based linker for PROTACs, joining two essential ligands critical for PROTAC molecule formation and enabling selective protein degradation via the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two ligands connected by a linker: one binds to an E3 ubiquitin ligase, and the other targets the protein for degradation. They leverage the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
