

SVMP Protein, Bothrops jararaca, Recombinant (His & KSI)

General Information

Synonyms:	von Willebrand factor-dependent platelet coagglutinin; Snake venom metalloproteinase (SVMP); Zinc metalloproteinase-disintegrin-like botrocetin
Protein Construction:	1-25 aa
Species:	Bothrops jararaca
Expression Host:	E. coli
Accession:	P22028
Molecular Weight:	18.0 kDa (predicted)
AA Sequence:	IISPPVCGNELLEEGEEDCGTPEN

QC Testing

Biological Activity:	Activity has not been tested. It is theoretically active, but we cannot guarantee it. If you require protein activity, we recommend choosing the eukaryotic expression version first.
Purity:	> 85% as determined by SDS-PAGE.
Endotoxin:	< 1.0 EU/ μ g of the protein as determined by the LAL method.
Formulation:	If the delivery form is liquid, the default storage buffer is Tris/PBS-based buffer, 5%-50% glycerol. If the delivery form is lyophilized powder, the buffer before lyophilization is Tris/PBS-based buffer, 6% Trehalose, pH 8.0.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in sterile deionized water. The product concentration should not be less than 100 μ g/mL. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Metalloproteinase that binds to von Willebrand factor (VWF) and induces its interaction with GPIb (GP1BA), resulting in platelet aggregation.
