

RXFP2 Protein, Human, Recombinant (His & Myc)

General Information

Synonyms:	RXFP2;GPR106;GREAT;LGR8;G-protein coupled receptor 106;Relaxin receptor 2;Relaxin family peptide receptor 2;Leucine-rich repeat-containing G-protein coupled receptor 8;G-protein coupled receptor affecting testicular descent
Protein Construction:	33-158 aa
Species:	Human
Expression Host:	E. coli
Accession:	Q8WXD0
Molecular Weight:	21.1 kDa (predicted)
AA Sequence:	FALTQGSMITPSCQKGYFPCGNLTKCLPRAFHCDGKDDCGNGADEENCGLDTSGWATIFGTVHGNANSVALT QECFLKQYPQCCDCKETELECVNGDLKSVPMSNNVTLLSLKKNKIHSPLDKVFI

QC Testing

Biological Activity:	Activity has not been tested. It is theoretically active, but we cannot guarantee it. If you require protein activity, we recommend choosing the eukaryotic expression version first.
Purity:	> 90% as determined by SDS-PAGE.
Endotoxin:	< 1.0 EU/ μ g of the protein as determined by the LAL method.
Formulation:	If the delivery form is liquid, the default storage buffer is Tris/PBS-based buffer, 5%-50% glycerol. If the delivery form is lyophilized powder, the buffer before lyophilization is Tris/PBS-based buffer, 6% Trehalose, pH 8.0.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in sterile deionized water. The product concentration should not be less than 100 μ g/mL. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Receptor for relaxin. The activity of this receptor is mediated by G proteins leading to stimulation of adenylate cyclase and an increase of cAMP. May also be a receptor for Leydig insulin-like peptide (INSL3).
