

Vaccinia virus (strain Copenhagen) L1 Protein (His & Myc)

General Information

Synonyms:	Virion membrane protein M25;OPG099;Entry-fusion complex associated protein OPG095; Protein L1;EFC-associated protein OPG095
Protein Construction:	2-183 aa
Species:	VACV
Expression Host:	Baculovirus Insect Cells
Accession:	P20540
Molecular Weight:	23.2 kDa (predicted)
AA Sequence:	GAAASIQTTVNTLSERISSKLEQANASAQTKCDIEIGNFYIRQNHGCNLTVKNMCSADADAQLDAVLSAATE TYSGLTPEQKAYVPAMFTAALNIQTSVNTVVRDFENYVKQTCNSSAVVDNKLKIQNVIIDECYGAPGSPTNLE FINTGSSKGNCAIKALMQLTTKATTQIAPRQVAGTG

QC Testing

Biological Activity:	Activity has not been tested. It is theoretically active, but we cannot guarantee it. If you require protein activity, we recommend choosing the eukaryotic expression version first.
Purity:	> 85% as determined by SDS-PAGE.
Endotoxin:	< 1.0 EU/μg of the protein as determined by the LAL method.
Formulation:	If the delivery form is liquid, the default storage buffer is Tris/PBS-based buffer, 5%-50% glycerol. If the delivery form is lyophilized powder, the buffer before lyophilization is Tris/PBS-based buffer, 6% Trehalose, pH 8.0.

Preparation and Storage

Reconstitution:	Reconstitute the lyophilized protein in sterile deionized water. The product concentration should not be less than 100 μg/mL. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.
Stability & Storage:	Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots. <small>Actual storage temperature shall be subject to the COA.</small>
Shipping:	In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Envelope protein which probably plays a role in virus entry into the host cell. Is probably involved in the virus attachment to the host cell surface and associates with the entry/fusion complex (EFC). Needed for fusion and

penetration of the virus core into host cell.
