Research Background

Receptor for erythropoietin, which mediates erythropoietin-induced erythroblast proliferation and differentiation (PubMed: 10388848, PubMed: 2163695, PubMed: 2163696, PubMed: 8662939, PubMed: 9774108). Upon EPO stimulation, EPOR dimerizes triggering the JAK2/STAT5 signaling cascade (By similarity). In some cell types, can also activate STAT1 and STAT3 (PubMed: 11756159). May also activate the LYN tyrosine kinase (By similarity)|Acts as a dominant-negative receptor of EPOR-mediated signaling
