## Biological Description

Description	OPSS-PEG8-COOH is a PEG-based linker for PROTACs, facilitating the connection of two essential ligands critical for PROTAC molecule formation, and enabling selective protein degradation via the ubiquitin-proteasome system within cells (PROTACs) [OPSS-PEG8-COOH].
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two distinct ligands connected by a linker; one binds to an E3 ubiquitin ligase, and the other targets a specific protein. They leverage the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
