

Protein L Agarose

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage:

Store at 4°C

Actual storage temperature shall be subject to the COA.

Biological Description

Description

TargetMol's Protein L Agarose is composed of highly cross-linked agarose gel microspheres in a high density orientation. Recombinant Protein L is an immunoglobulin-binding protein that binds to the κ light chain of immunoglobulins without affecting their antigen-binding ability. Compared to other antibody-binding proteins such as Protein A and Protein G, Protein L has a broader range of Ig and its isoforms, binding not only all types of immunoglobulins (e.g., IgG, IgM, IgA, IgE, and IgD), but also single-chain antibodies (scFv) and Fab fragments. TargetMol's Protein L Agarose are suitable for the isolation and purification of IgG from samples such as cell lysates, cell secretion supernatants, serum, ascites, and more.
