## Biological Description

Description	Dihydroconiferyl alcohol is a natural lignan that promotes the growth of soybean healing tissues and exhibits cytoprotective activity with antioxidant effects in MCF-7 cells cultured under H <sub>2</sub> O <sub>2</sub> stress.
Targets(IC50)	Antioxidant, Drug Metabolite
In vitro	Dihydroconiferyl alcohol was active in tobacco callus and radish leaf senescence assays, but was inactive in four other cytokinin activity tests. Dihydroconiferyl alcohol acted synergistically with kinetin to promote soybean callus growth.
