## Biological Description

Description	Methyl 3-hydroxypropanoate is a PROTAC linker compound, which belongs to the alkyl/ether family. It is commonly employed in the synthesis of PROTACs.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two ligands connected by a linker: one targets an E3 ubiquitin ligase, and the other targets a specific protein. They utilize the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
