

Anti-CA9/Carbonic Anhydrase IX Antibody-FITC (4F130)

Product Details

Ig Type:	Rabbit IgG
Reactivity:	Human
Conjugation:	FITC
Clone:	4F130
Purification:	Protein A

Applications

Verified Activity:	Flow cytometric analysis of Human CAIX expression on Hela cells. Cells were stained with FITC-conjugated anti-Human CAIX. The fluorescence histograms were derived from gated events with the forward and side light-scatter characteristics of intact cells.
Application:	FCM
Recommended	10 µl/Test, 0.1 mg/ml

Properties

Stability & Storage:	Store at 2°C-8°C for 12 months, do not freeze. Keep away from direct sunlight.
Shipping:	Shipping with blue ice.

Antigen Details

Immunogen:	Recombinant Protein: Human Carbonic Anhydrase IX/CA9 Protein (TMPY-00690)
Antigen Species:	Human
Synonyms:	G250;P54/58N;MN;PMW1;EC 4.2.1.1;CAIX;RCC;CA9;CA-IX;Carbonic Anhydrase IX
Biology Area:	Cancer Drug Targets

Research Background

Carbonic anhydrases IX (CA IX), also known as membrane antigen MN or CA9, is a member of the carbonic anhydrase (CA) family and may be involved in cell proliferation and cellular transformation. CAs are zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide ($H_2O + CO_2 = H^+ + HCO_3^-$) and thus participate in a variety of biological and physical processes. CA IX protein is expressed primarily in carcinoma cells lines, and the expression is cell density dependent and has been shown to be strongly induced by hypoxia, accordingly facilitates adaptation of tumor cells to hypoxic conditions. It is involved in tumorigenesis through many pathways, such as pH regulation and cell adhesion control. CA IX is used as a marker of tumor hypoxia and as a new therapeutic target for many human carcinomas and cancers. Cancer ImmunotherapyImmune CheckpointImmunotherapyTargeted Therapy
