

Anti-Human cytomegalovirus (HCMV) Glycoprotein B/gB Antibody (6W231)

Product Details

Ig Type:	Rabbit IgG
Conjugation:	Unconjugated
Clone:	6W231
Purification:	Protein A

Applications

Application:	ELISA, WB
Recommended	WB: his antibody can be used at 1:500-1:1000 with the appropriate secondary reagents to detect Human CMV gB in WB. Using a DAB detection system, the detection limit for Human CMV gB is approximately 0.125 ng/lane under non-reducing conditions and 100 ng/lane under reducing conditions.; ELISA: 1:5000-1:10000

Properties

Stability & Storage:	Store at 2°C-8°C for 1 month. Store at -20°C or -80°C for 12 months. Avoid repeated freeze-thaw cycles. Preservative-Free.
Shipping:	Shipping with blue ice.

Antigen Details

Immunogen:	Recombinant Protein: Human CMV gB / Glycoprotein B protein (TMPY-01201)
Antigen Species:	CMV
Synonyms:	Human cytomegalovirus (HCMV) Glycoprotein B/gB

Research Background

Cytomegalovirus (CMV) (human herpesvirus 5) glycoprotein B, also referred as CMV gB or gB, which belongs to the herpesviridae glycoprotein B family. It is a 97-amino acid glycoprotein encoded by the ORF of UL55. Cytomegalovirus Glycoprotein B protein is the most abundant component of the envelope, a target of neutralizing antibodies with at least two defined neutralizing epitopes and an essential replication component. Cytomegalovirus Glycoprotein B protein plays important roles in HCMV entry, cell-cell spread of internal virions, and fusion of infected cells. In addition, Cytomegalovirus Glycoprotein B protein is one envelope protein capable of heparin binding. It forms a physical association with host cell annexin II independent of the presence of calcium.
