

Anti-ATP1B4 Antibody (2T513)

Product Details

Ig Type:	Rabbit IgG
Reactivity:	Human
Conjugation:	Unconjugated
Clone:	2T513
Purification:	Protein A

Applications

Application:	ELISA
Recommended	ELISA: 1:25000-1:50000

Properties

Stability & Storage:	Store at 2°C-8°C for 1 month. Store at -20°C or -80°C for 12 months. Avoid repeated freeze-thaw cycles. Preservative-Free.
Shipping:	Shipping with blue ice.

Antigen Details

Immunogen:	Recombinant Protein: Human ATP1B4 protein
Antigen Species:	Human
Synonyms:	ATPase, Na ⁺ /K ⁺ transporting, beta 4 polypeptide;ATPase, Na ⁺ /K ⁺ transporting, β 4 polypeptide

Research Background

ATP1B4 is a member of the X(+)/potassium ATPases subunit beta family. It is highly expressed in skeletal muscle and at a lower level in heart. ATP1B4 gene can be found in all vertebrate genomes sequenced to date. However, this gene has undergone a change in function in placental mammals compared to other species. Specifically, in fish, avian, and amphibian species, this gene encodes plasma membrane-bound beta-subunits of Na, K-ATPase. In placental mammals, the encoded protein interacts with the nuclear transcriptional coregulator SKIP and may be involved in the regulation of TGF-beta signaling. ATP1B4 may act as a transcriptional coregulator during muscle development through its interaction with SNW1. Na⁺, K⁺-ATPase is an important regulator of intracellular electrolyte levels in most mammalian cells. It is a Mg²⁺-dependent transport pump responsible for maintaining the low intracellular Na⁺:K⁺ ratio that is essential for cell homeostasis and physiological function. It catalyzes the active uptake of K⁺ and extrusion of Na⁺ at the expense of hydrolyzing ATP with a stoichiometry of 3 Na⁺ for 2 K⁺. ATP1B4 has lost its ancestral function as a Na,K-ATPase beta-subunit.
