

## Anti-GOLPH2/GOLM1 Antibody (5X254)

## Product Details

|               |              |
|---------------|--------------|
| Ig Type:      | Mouse IgG2a  |
| Reactivity:   | Human        |
| Conjugation:  | Unconjugated |
| Clone:        | 5X254        |
| Purification: | Protein A    |

## Applications

|              |                      |
|--------------|----------------------|
| Application: | ELISA                |
| Recommended  | ELISA: 1:1000-1:2000 |

## Properties

|                      |                                                                                                                            |
|----------------------|----------------------------------------------------------------------------------------------------------------------------|
| Stability & Storage: | Store at 2°C-8°C for 1 month. Store at -20°C or -80°C for 12 months. Avoid repeated freeze-thaw cycles. Preservative-Free. |
| Shipping:            | Shipping with blue ice.                                                                                                    |

## Antigen Details

|                  |                                                                        |
|------------------|------------------------------------------------------------------------|
| Immunogen:       | Recombinant Protein: Human GOLM1 / GP73 protein                        |
| Antigen Species: | Human                                                                  |
| Synonyms:        | C9orf155;golgi membrane protein 1;GP73;GOLPH2;HEL46;PSEC0257;bA379P1.3 |

## Research Background

Golgi membrane protein 1, also known as Golgi membrane protein GP73, Golgi phosphoprotein 2, and GOLM1, is a protein that belongs to the GOLM1 / CASC4 family. GOLM1 is widely expressed. It is highly expressed in the colon, prostate, trachea, and stomach. It is expressed at a lower level in testis, muscle, lymphoid tissues, white blood cells, and spleen. It is predominantly expressed by cells of the epithelial lineage. GOLM1 is expressed at a low level in the normal liver. Expression significantly increases in virus (HBV, HCV) infected liver. Expression of GOLM1 does not increase in liver disease due to non-viral causes (alcohol-induced liver disease, autoimmune hepatitis). Increased expression in hepatocytes appears to be a general feature of advanced liver disease. In liver tissue from patients with adult giant-cell hepatitis (GCH), GOLM1 is strongly expressed in hepatocyte-derived syncytial giant cells. GOLM1 is constitutively expressed by biliary epithelial cells but not by hepatocytes.
