

Anti-TNFR2/CD120b/TNFR1B Antibody-APC (2D734)

Product Details

Ig Type:	Rabbit IgG
Reactivity:	Mouse
Conjugation:	APC
Clone:	2D734
Purification:	Protein A

Applications

Verified Activity:	Flow cytometric analysis of mouse TNFR2(TNFRSF1B) expression on L929 cells. L929 cells were stained with APC-conjugated anti-mouse TNFR2(TNFRSF1B). The histogram were derived from gated events with the forward and side light-scatter characteristics of intact cells.
Application:	FCM
Recommended	5 µl/Test, 0.1 mg/ml

Properties

Stability & Storage:	Store at 2°C-8°C for 12 months, do not freeze. Keep away from direct sunlight.
Shipping:	Shipping with blue ice.

Antigen Details

Immunogen:	Recombinant Protein: Mouse TNFR2 / CD120b / TNFRSF1B protein (TMPY-01697)
Antigen Species:	Mouse
Synonyms:	TNFR2;TNF-R75;TNF-R-II;p75;tumor necrosis factor receptor superfamily, member 1b;TNFR80;CD120b;TNFR1B;TBPII;TNFR2;p75TNFR
Biology Area:	Neuroinflammation

Research Background

Tumor necrosis factor receptor superfamily, member 1B (TNFRSF1B), also known as Tumor necrosis factor receptor 2 (TNFR2) or CD120b antigen, is a member of the tumor necrosis factor receptor superfamily. TNFR2/CD120b/TNFRSF1B is a member of the TNF-receptor superfamily. This protein and TNF-receptor 1 form a heterocomplex that mediates the recruitment of two anti-apoptotic proteins, c-IAP1 and c-IAP2, which possess E3 ubiquitin ligase activity. Knockout studies in mice also suggest a role of this protein in protecting neurons from apoptosis by stimulating antioxidative pathways. TNFR2/CD120b/TNFRSF1B is not a major contributing factor to the genetic risk of type 2 diabetes, its associated peripheral neuropathy and hypertension and related metabolic traits in North Indians. Tumor necrosis factor receptor superfamily, member 1B (TNFRSF1B) has been reported to be associated with SLE risk in Japanese populations. TNFR2/CD120b/TNFRSF1B serves as a receptor with high affinity for TNFSF2 and approximately 5-fold lower affinity for homotrimeric TNFSF1. This receptor mediates most of the metabolic effects of TNF-alpha. Isoform 2 blocks TNF-alpha-induced apoptosis, which suggests that it regulates TNF-alpha function by antagonizing its biological activity.
