

Human Immunoglobulin M

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	Human Immunoglobulin M (IgM) is an antibody secreted by the adaptive immune system in response to foreign antigens. It is a primary type of immunoglobulin released into circulation during the early stages of the primary antibody response. Human Immunoglobulin M forms a pentamer comprising five IgG equivalents, with 10 Fab fragments, allowing for 10 antigen binding sites. Additionally, Human Immunoglobulin M acts as a complement (complement) activator.
Targets(IC50)	Complement System

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins
