

## Rabbit Anti-Avidin Secondary Antibody

### Product Details

Ig Type:	IgG
Reactivity:	Avidin
Purification:	Protein A purified

### Applications

Application:	ELISA,IF,IHC-F,IHC-P,WB
Recommended	WB: 1:1000-5000; IHC-P: 1:100-500; IHC-F: 1:200-1000; ELISA: 1:2000-10000

### Properties

Stability & Storage:	Store at -20°C or -80°C for 2 years (lyophilized powder). Avoid repeated freeze-thaw cycles.
Shipping:	Shipping with blue ice.

### Antigen Details

Immunogen:	Native Avidin
Synonyms:	LOC396260;AVD

### Research Background

Avidin is a tetrameric or dimeric biotin-binding protein produced in the oviducts of birds, reptiles and amphibians deposited in the whites of their eggs. In chicken egg white, avidin makes up approximately 0.05% of total protein (approximately 1.8 mg per egg). The tetrameric protein contains four identical subunits (homotetramer), each of which can bind to biotin (Vitamin B7, vitamin H) with a high degree of affinity and specificity. In its tetrameric form, avidin is estimated to be between 66-69 kDa in size. Ten percent of the molecular weight is attributed to carbohydrate content composed of four to five mannose and three N-acetylglucosamine residues. The carbohydrate moieties of avidin contain at least three unique oligosaccharide structural types that are similar in structure and composition.
