

Anti-ERG Antibody

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Store at low temperature
Store at -20°C

Actual storage temperature shall be subject to the COA.

Biological Description

Description	Anti-ERG Antibody is a highly specialized monoclonal antibody target the human ETS-related gene protein, which serves as a definitive transcription factor marker for vascular endothelial cells and is frequently overexpressed in prostate malignancies due to chromosomal translocations, detection of ERG-positive cellular populations across various preclinical experimental models to study oncogenic signaling pathways and the molecular mechanisms of neoplastic transformation in glandular tissues.
Targets(IC50)	Others
In vitro	In cell-based models of leukemia, Anti-ERG Antibody was used to characterize the ERG-induced mesenchymal-like state associated with chemoresistance and altered gene expression [1].
