Biological Description

Description	Hersintuzumab is a humanized monoclonal antibody targeting the human epidermal growth factor receptor 2 (HER2/ErbB2). By specifically binding to the extracellular domain of HER2, it blocks downstream proliferative signaling pathways (e.g., PI3K/Akt) and mediates antibody-dependent cellular cytotoxicity (ADCC), making it widely used to research therapeutic strategies for HER2-positive malignancies like breast and gastric cancers.
Targets(IC50)	EGFR

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins

This product is for Research Use Only · Not for Human or Veterinary or Therapeutic Use
