

A2[3]G1 N-glycan

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	A2[3]G1 N-glycan is a Lewis X (LeX) polysaccharide with two asymmetric antennae and serves as a precursor to A2G1F1(a1-3) and asymmetric biantennary N-glycan. SLeX, a ligand for the cell adhesion molecule E-selectin, is specifically expressed at sites of inflammatory lesions. Conjugates of SLeX polysaccharides are designed to deliver drugs to these inflammation sites.
Targets(IC50)	Others

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins
