Biological Description

| | |
|---------------|---|
| Description | Anti-TMPRSS2 Antibody is a highly specialized monoclonal antibody target the human transmembrane protease serine 2 protein with exceptional binding affinity and selectivity, inhibition of proteolytic cleavage events across various preclinical experimental models of prostate cancer and viral infection to evaluate the functional role of serine proteases in pathological tissue remodeling and cellular entry mechanisms during strictly monitored laboratory observation periods. |
| Targets(IC50) | Serine Protease |
| In vitro | In proteolytic cascade assays using prostate cancer cell lines, Anti-TMPRSS2 Antibody was used to characterize the activation of HGF/c-MET signaling and the induction of epithelial-mesenchymal transition [1]. |
