

Tat-braftide

Chemical Properties

CAS No. :

Formula: C128H227N51O30S

Molecular Weight:

Keep away from moisture

Storage:

Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	Tat-braftide is a peptide inhibitor designed to block the dimerization of BRAF, thereby inhibiting its kinase activity. After disrupting BRAF dimers, Tat-braftide facilitates proteasomal degradation of BRAF proteins, directly reducing BRAF kinase activity and diminishing MAPK pathway activation. Tat-braftide is useful for studying RAF kinase function within the MAPK signaling pathway and researching BRAF-mutant cancers.
Targets(IC50)	Raf

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins

This product is for Research Use Only · Not for Human or Veterinary or Therapeutic Use
