

[Nle8] Somatostatin (1-28) TFA

Chemical Properties

CAS No. :

Formula: C138H209N41O39S2.xC2HF3O2

Molecular Weight:

Keep away from moisture

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

| | |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | [Nle8] Somatostatin (1-28) TFA is a derivative of somatostatin (1-28) where methionine at position 8 is replaced with norleucine. This compound enhances the release of amylase and increases cyclic AMP in pancreatic acini. |
| Targets(IC50) | Somatostatin |
