

Diocatin A hydrochloride

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	Diocatin A hydrochloride is a metabolite of Streptomyces and acts as an inhibitor of human dipeptidyl aminopeptidase II. It curtails aflatoxin production in Aspergillus parasiticus with an IC50 of 0.4 µM. The compound reduces the mRNA levels of genes associated with aflatoxin biosynthesis and the regulatory gene aflR, inhibits conidiation, and decreases the mRNA levels of the brlA gene, while also promoting kojic acid production. Additionally, Diocatin A hydrochloride inhibits the production of sterigmatocystin. It exerts multifaceted regulatory effects on the production and differentiation of fungal secondary metabolites.
Targets(IC50)	Proteasome,Antibacterial,Antifungal

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins

This product is for Research Use Only· Not for Human or Veterinary or Therapeutic Use
