

## D1/D5 Receptor agonist-1

## Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

## Biological Description

Description	D1/D5 Receptor agonist-1 is an orally active D1/D5 receptor agonist with the ability to cross the blood-brain barrier. It demonstrates significant efficacy in the cAMP pathway and $\beta$ -arrestin recruitment, with EC <sub>50</sub> values of 3.7 nM for D1R cAMP, 91 nM for D1R $\beta$ -arrestin, and 129 nM for D1R internalization, and a K <sub>i</sub> value of 111 nM for D1R binding affinity. In rats, D1/D5 Receptor agonist-1 inhibits $\beta$ -arrestin signaling involved in L-DOPA-induced dyskinesia. This compound is applicable in Parkinson's disease research.
Targets(IC50)	Arrestin,Dopamine Receptor
In vitro	D1/D5 Receptor agonist-1 (Compound 24) (10 <sup>-4</sup> - 10 $\mu$ M) demonstrates significant efficacy in the cAMP pathway and $\beta$ -arrestin protein recruitment, with EC <sub>50</sub> values of 3.7 nM for D1R cAMP, 91 nM for D1R $\beta$ -arrestin, and 129 nM for D1R internalization. The compound shows a binding affinity K value of 111 nM for D1R.
In vivo	Compound 24, a D1/D5 receptor agonist, administered orally in a single dose of 0.3-3 mg/kg, inhibits $\beta$ -arrestin signaling in a rat model of L-DOPA-induced dyskinesia in Parkinson's disease.
