Biological Description

Description	Colominic acid sodium salt is an N-acetylneuraminic acid homopolymer produced by Escherichia coli, used to study the process of protein polysialylation and exhibiting antibacterial activity.
Targets(IC50)	Antibacterial, Antibiotic
In vitro	Colominic acid sodium salt (Polysialic acid) specifically targets a narrow range of central nervous system components through N-glycosylation, including cell adhesion molecules like neural cell adhesion molecule (NCAM), synaptic cell adhesion molecule 1 (SynCAM1), and the neuropilin-2 receptor.[1]
