

## ZBP1 Covalent PROTAC-2

## Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage:

Keep away from direct sunlight

Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

## Biological Description

Description	ZBP1 Covalent PROTAC-2 (2a+aptamer) is a covalent PROTAC (proteolysis-targeting chimeric molecule) targeting the Z-DNA binding protein 1 (ZBP1). This compound consists of a DNA aptamer, which specifically binds to ZBP1, and an E3 enzyme recruiting unit. By integrating the high specificity of the DNA aptamer, the efficiency of covalent binding, and the degradation-inducing capability of PROTACs, ZBP1 Covalent PROTAC-2 represents a powerful tool for targeted protein degradation.
Targets(IC50)	PROTACs

**Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins**
