

β -Glucosidase, Bacteroides fragilis

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	β -Glucosidase, Bacteroides fragilis (EC 3.2.1.21), is a glucosidase enzyme that targets the β 1 \rightarrow 4 glycosidic bonds between two glucose molecules or glucose-substituted molecules, such as cellobiose. It serves as an exocellulase and exhibits specificity for various β -D-glucoside substrates. β -Glucosidase catalyzes the hydrolysis of the non-reducing terminal residues of β -D-glucosides, releasing glucose.
Targets(IC50)	glycosidase

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins
