

Mutanolysin, Streptomyces globisporus ATCC 21553

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description

Mutanolysin from Streptomyces globisporus ATCC 21553 is an N-acetylmuramidase that can cleave bacterial cell wall polymer peptidoglycan at the β -N-acetylmuramoyl-(1 \rightarrow 4)-N-acetylglucosamine linkage. The carboxy-terminal region of mutanolysin plays a role in recognizing and binding unique cell wall polymers.
