

Tetrapropylammonium-d28 chloride

Chemical Properties

CAS No. :

Formula:

Molecular Weight:

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Actual storage temperature shall be subject to the COA.

Biological Description

Description	Tetrapropylammonium-d28 chloride is the deuterium-labeled form of Tetrapropylammonium chloride. As a member of the quaternary ammonium compounds, it is a cationic salt widely applied in industrial and biomedical fields. Tetrapropylammonium chloride functions effectively as a phase-transfer catalyst, facilitating the migration of reactants between immiscible phases in organic synthesis. Additionally, it serves as a surfactant in the formulation of personal care products, cleaning agents, textiles, and pharmaceuticals. The compound is also utilized in the production of certain polymers and resins.
Targets(IC50)	Others

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins

This product is for Research Use Only · Not for Human or Veterinary or Therapeutic Use
