Preparation and Storage

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Glutathione S-transferase omega-2 (GSTO2) is a unique member of the glutathione transferase superfamily with potential roles in cell growth regulation and protection against oxidative stress. It is distinct due to its lack of traditional GST activity, and it may contribute to disease development through post-transcriptional mechanisms.
