Biological Description

Description	Thiol-C9-PEG4-acid is a PEG-based linker for PROTACs that facilitates the conjugation of two essential ligands, playing a crucial role in the formation of PROTAC molecules and enabling selective protein degradation via the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs are bifunctional molecules that link a ligand for an E3 ubiquitin ligase to a ligand for a target protein, utilizing the intracellular ubiquitin-proteasome system to selectively degrade target proteins [1].
