## Biological Description

Description	Angoline (6-Methoxyldihydrochelerythrine) hydrochloride is a potent and selective IL6/STAT3 signaling pathway inhibitor (IC <sub>50</sub> : 11.56 μM). It inhibits STAT3 phosphorylation and its target gene expression, and inhibits cancer cell proliferation.
Targets(IC <sub>50</sub> )	STAT, IL Receptor, Interleukin
In vitro	Angoline as a potent and selective inhibitor of the STAT3 signaling pathway (IC <sub>50</sub> =11.56 μM). Angoline inhibited STAT3 phosphorylation and its target gene expression and consequently induced growth inhibition of human cancer cells with constitutively activated STAT3 (IC <sub>50</sub> =3.14-4.72 μM). This work provided a novel lead for the development of anti-cancer agents targeting the STAT3 signaling pathway.
