Biological Description

Description	H2N-PEG5-Hydrazide is a PEG-based linker for PROTACs that connects two essential ligands, facilitating the formation of PROTAC molecules. This linker enables selective protein degradation by utilizing the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs comprise two distinct ligands connected by a linker: one targeting an E3 ubiquitin ligase and the other the target protein. They harness the intracellular ubiquitin-proteasome system for selective degradation of target proteins[1].
