Biological Description

Description	PROTAC CDK9 degrader-5 is a selective PROTAC that mediates degradation of CDK9 via the proteasome pathway, efficiently degrading CDK9 42 and CDK9 55 isoforms with DC50 values of 0.10 μ M and 0.14 μ M, respectively [1].
Targets(IC50)	CDK,PROTACs
In vitro	PROTAC CDK9 degrader-5 (Compound 15e) at 1 μ M for a duration of 6 hours reduces the protein levels of MCL2 and competitively degrades CDK9 in MV411 cells [1]. Additionally, administration of PROTAC CDK9 degrader-5 at the same concentration demonstrates a time-dependent decrease in the protein levels of both MCL2 and CDK9, with sustained inhibition observed for up to 24 hours [1].
