

Lexatumumab

Chemical Properties

CAS No. :	845816-02-6
Formula:	
Molecular Weight:	143.48 kDa
Storage:	Store at low temperature -20°C for 1 year <small>Actual storage temperature shall be subject to the COA.</small>

Biological Description

Description	Lexatumumab (GHS-ETR 2) is a human excitatory monoclonal antibody targeting TRAIL receptor 2 that has anticancer activity and induces apoptosis in malignant mesothelioma. Lexatumumab can be used to study malignant pleural mesothelioma (MPM).
Targets(IC50)	Apoptosis
In vitro	Combining lexatumumab with cisplatin can synergistically inhibit cell growth and enhance apoptosis and death[1]. In different melanoma cell lines, lexatumumab (0-10 µg/ml, 72 h) induced varying degrees of cell death[2].
In vivo	Lexatumumab (10mg / kg, intravenous injection, twice a week) combined with Dacarbazine can increase the anti-tumor effect in mice [2].

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	0.007 mL	0.0348 mL	0.0697 mL
5 mM	0.0014 mL	0.007 mL	0.0139 mL
10 mM	0.0007 mL	0.0035 mL	0.007 mL
50 mM	0.0001 mL	0.0007 mL	0.0014 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Note: The dilution table applies only to solid products. For liquid products, please calculate the stock solution based on the stated concentration and/or density.
