

Cucurbitacin B 2-O-beta-D-glucoside

Chemical Properties

CAS No. :	65247-27-0
Formula:	C ₃₈ H ₅₆ O ₁₃
Molecular Weight:	720.853
Storage:	Powder: -20°C for 3 years In solvent: -80°C for 1 year Actual storage temperature shall be subject to the COA.

Biological Description

Description	Cucurbitacin B 2-o- α 2-D-glucoside has anticancer activity.
Targets(IC50)	Others
In vitro	A process for CuBg biotransformation to CuB was developed for the first time. A strain of Streptomyces species that converts CuBg into CuB was isolated from an enrichment culture of C. melo pedicels. After optimization of conditions for enzyme production and biotransformation, a maximum conversion rate of 92.6 % was obtained at a CuBg concentration of 0.25 g/L. When biotransformation was performed on C. melo pedicel extracts, the CuB concentration in the extracts increased from 1.50 to 3.27 g/L. The conversion rate was almost 100 %.

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	1.3873 mL	6.9363 mL	13.8725 mL
5 mM	0.2775 mL	1.3873 mL	2.7745 mL
10 mM	0.1387 mL	0.6936 mL	1.3873 mL
50 mM	0.0277 mL	0.1387 mL	0.2775 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Note: The dilution table applies only to solid products. For liquid products, please calculate the stock solution based on the stated concentration and/or density.
