Biological Description

Description	(+)-Cloprostenol is a analogue of prostaglandin F ₂ α (PGF ₂ α), and is selective prostaglandin receptor agonistic.
Targets(IC50)	Others,Prostaglandin Receptor
In vitro	D-Closrostenol and PGF ₂ α have the same potency. In inhibiting the binding of [3H] PGF ₂ α to the corpus luteum membrane, its potency is about 150 times that of dl-cloprostenol (P<0.05), and its potency is about 280 times that of PGE ₁ . However, in myometrial cell membranes, d-cloprostenol and PGF ₂ alpha are about 10 times more potent than dl-cloprostenol and 95 times more potent than PGE ₁ [2].
