Biological Description

Description	Azido-PEG5-amine is a PEG-based linker for PROTACs that connects two essential ligands, facilitating the formation of PROTAC molecules and enabling selective protein degradation via the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs comprise two distinct ligands linked together, one targeting an E3 ubiquitin ligase and the other the intended protein. They utilize the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
