Biological Description

Description	Mal-C6-amine (TFA) is an alkyl chain-based linker used in the synthesis of PROTACs[1].
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two distinct ligands connected by a linker: one ligand targets an E3 ubiquitin ligase, while the other targets the intended protein. PROTACs utilize the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
