Biological Description

Description	HO-PEG-mal (MW 5000) is a PEG-based linker for PROTACs that connects two essential ligands necessary for forming PROTAC molecules, enabling selective protein degradation through the ubiquitin-proteasome system in cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs comprise two distinct ligands linked together: one ligand targets an E3 ubiquitin ligase, and the other targets a specific protein. They utilize the intracellular ubiquitin-proteasome system to selectively degrade target proteins [1].
