

Chikungunya virus (CHIKV) (strain SL-CK1) E2/Envelope 2 Protein (His)

General Information

Protein Construction:	A DNA sequence encoding the Chikungunya virus (CHIKV)(strain SL-CK1) E2/Envelope 2 (ADG95913.1) (Ser326-Gln666) was expressed with a polyhistidine tag at the C-terminus. Predicted N terminal: Ser 326
Species:	CHIKV
Expression Host:	Baculovirus Insect Cells
Accession:	A5Y7Y5
Molecular Weight:	39.8 kDa (predicted)

QC Testing

Biological Activity:	Activity testing is in progress. It is theoretically active, but we cannot guarantee it. If you require protein activity, we recommend choosing the eukaryotic expression version first.
Purity:	> 90 % as determined by SDS-PAGE.
Endotoxin:	< 1.0 EU/µg of the protein as determined by the LAL method.
Formulation:	Lyophilized from a solution filtered through a 0.22 µm filter, containing 20 mM Tris, pH 7.5, 500 mM NaCl, 10% gly. Typically, a mixture containing 5% to 8% trehalose, mannitol, and 0.01% Tween 80 is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:	Reconstituted with sterile deionized water to 0.25 mg/mL. Reconstitution conditions may vary depending on the lot.
Stability & Storage:	It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots. <small>Actual storage temperature shall be subject to the COA.</small>
Shipping:	In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.
