

HER2/ERBB2 Protein, Human, Recombinant (mFc)

General Information

| | |
|-----------------------|---|
| Synonyms: | HER2;MLN 19;erb-b2 receptor tyrosine kinase 2;HERVWENV;HERV-W-ENV;ENV;TKR1;MLN19;EGFR2;HER-2/neu;NEU;HERV-7q;HERV7Q;HERVW;HER-2;ERVWE1;CD340;NGL;ENVW |
| Protein Construction: | A DNA sequence encoding the human Her2/ERBB2 (NP_004439.2) (Met1-Thr652) was expressed with the Fc region of mouse IgG1 at the C-terminus. Predicted N terminal: Thr 23 |
| Species: | Human |
| Expression Host: | HEK293 Cells |
| Accession: | NP_004439.2 |
| Molecular Weight: | 95.75 kDa (predicted); 120.60 kDa (reducing conditions) |

QC Testing

| | |
|----------------------|--|
| Biological Activity: | Immobilized Recombinant Human Her2/ERBB2 Protein (ECD, mFc Tag) at 2 µg/ml (100 µl/well) can bind Anti-ErbB2 Antibody (Trastuzumab), the EC50 is 12-36 ng/mL. |
| Purity: | > 95 % as determined by SDS-PAGE. > 90 % as determined by SEC-HPLC. |
| Endotoxin: | < 1.0 EU/µg of the protein as determined by the LAL method. |
| Formulation: | Lyophilized from a solution filtered through a 0.22 µm filter, containing PBS, pH 7.4. Typically, a mixture containing 5% to 8% trehalose, mannitol, and 0.01% Tween 80 is incorporated as a protective agent before lyophilization. |

Preparation and Storage

Reconstitution:

A Certificate of Analysis (CoA) containing reconstitution instructions is included with the products. Please refer to the CoA for detailed information.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Human epidermal growth factor receptor 2 (HER2), also known as ErbB2, NEU, and CD340, is a type I membrane glycoprotein and belongs to the epidermal growth factor (EGF) receptor family. HER2 protein cannot bind growth factors due to the lacking of ligand binding domain of its own and autoinhibited constitutively. However, HER2 forms a heterodimer with other ligand-bound EGF receptor family members, therefore stabilizes ligand binding

and enhances kinase-mediated activation of downstream molecules. HER2 plays a key role in development, cell proliferation and differentiation. HER2 gene has been reported to associate with malignancy and a poor prognosis in numerous carcinomas, including breast, prostate, ovarian, lung cancers and so on.
