Data Sheet (Cat.No.TMPY-06939)

TargetMol

Carbonic Anhydrase 9 Protein, Human, Recombinant (hFc & Avi), Biotinylated

General Information

Synonyms:	MN;CAIX;Carbonic Anhydrase IX
Protein Construction:	A DNA sequence encoding the Human CA9 (NP_001207.2)(Met1-Asp414) was expressed with a c-terminal AVI tagged Fc region of human IgG1 at the C-terminus (Fc-AVI). The expressed protein was biotinylated in vivo by the Biotin-Protein ligase (BirA enzyme) which is co-expressed. Predicted N terminal: Gln 38
Species:	Human
Expression Host:	HEK293 Cells
Accession:	NP_001207.2
Molecular Weight:	69.51 kDa (predicted); 82.1 kDa (reducing conditions)

QC Testing

Biological Activity:	1.Immobilized Anti-CA9 (Girentuximab biosimilar) at 2 μg/mL (100 μL/well) can bind Recombinant Human Carbonic Anhydrase IX Protein (Fc & Avi Tag),Biotinylated (Cat#TMPY-06939), the EC50 is 0.8-3 ng/mL(QC tested). 2.Immobilized Recombinant Human Carbonic Anhydrase IX Protein (Fc & Avi Tag), Biotinylated (Cat#TMPY-06939) at 1 μg/mL (100 μL/well) on Streptavidin precoated (5 μg/mL, 100 μL/well) plate can bind anti-CA9 (Girentuximab biosimilar), the EC50 is 4.3 ng/mL (Routinely tested).
Purity:	≥ 95 % as determined by SDS-PAGE. ≥ 90 % as determined by SEC-HPLC.
Endotoxin:	< 1.0 EU/μg of the protein as determined by the LAL method.
Formulation:	Lyophilized from a solution filtered through a 0.22 μm filter, containing PBS, pH 7.4. Typically, a mixture containing 5% to 8% trehalose, mannitol, and 0.01% Tween 80 is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:

A Certificate of Analysis (CoA) containing reconstitution instructions is included with the products. Please refer to the CoA for detailed information.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Actual storage temperature shall be subject to the COA.

Shipping:

In general, lyophilized powders are shipped with blue ice, while solutions are shipped with dry ice.

Protein Background

Carbonic anhydrases IX (CA IX), also known as membrane antigen MN or CA9, is a member of the carbonic anhydrase (CA) family and may be involved in cell proliferation and cellular transformation. CAs are zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide ($H_2O + CO_2 = H^+ + HCO_3^-$) and thus participate in a variety of biological and physical processes. CA IX protein is expressed primarily in carcinoma cells lines, and the expression is cell density dependent and has been shown to be strongly induced by hypoxia, accordingly facilitates adaptation of tumor cells to hypoxic conditions. It is involved in tumorigenesis through many pathways, such as pH regulation and cell adhesion control. CA IX is used as a marker of tumor hypoxia and as a new therapeutic target for many human carcinomas and cancers.Cancer ImmunotherapyImmune CheckpointImmunotherapyTargeted Therapy
